ABSTRACT

An antiroll and anti-pitch device for a vehicle having four sets of at least one wheel wheels provided in a two-by-two arrangement, including a central resilient element, two central actuating elements, four wheel actuating elements, and four wheel transforming elements. Each of the wheel actuating elements is associated with one of the four ~~sets of at least one wheel~~ wheels and capable of providing a transmitting force ~~determined~~ caused by a vertical force to which the associated ~~set of at least one wheel~~ is subjected. The central resilient element is capable of opposing a force provided by a first of the central actuating element and a force provided by a second of the central actuating elements.
